

Environmental and Sustainability Mission Statement:

As an owner managed company, at Trimfix we make it our mission to use as little packing as the product allows and to recycle everything possible, from boxes to bags and pallets – that includes boxes and pallets received via delivery to us of raw materials and consumables used in the manufacturing of parts.

We reuse and recycle both inhouse and by collecting and reusing packaging from local customers.

As we produce a variety of thermoplastic and rubber parts for our customers world-wide, we understand that we do need to follow customer requirements which are product specific.

However, we strive to ensure that all plastic parts / packaging etc we produce / use is as recyclable and sustainable as each individual product allows.

100% of parts produced by Trimfix are [Made in England](#).

We regrind and reuse 99% of sprues and reject thermoplastic and rubber parts to reduce our waste.

We recycle 100% of paper and cardboard waste via a local recycling company.

We have installed solar panels to reduce to reduce our electricity requirements and carbon footprint.

[Working together, we can all make a difference to the beautiful world we share.](#)
